Abstracts

A microgrid is a small power grid with defined boundaries that can operate both when connected to the larger electrical grid and as an 'island' when there's an interruption on the main grid. It draws on distributed energy resources, like solar power, to serve customers within the microgrid footprint. These benefits extend to surrounding communities, with reliable energy allowing better access to food, supplies and public services.

The industry's leading manufacturers are ABB, NEC and GE, with revenues of 7.61%, 5.68% and 4.85% respectively in 2019.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Microgrid market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Microgrid industry.

Based on our recent survey, we have several different scenarios about the Microgrid YoY growth rate for 2020. The probable scenario is expected to grow by a xx% in 2020 and the revenue will be xx in 2020 from US\$ 13160 million in 2019. The market size of

Microgrid will reach xx in 2026, with a CAGR of xx% from 2020 to 2026.
