## Abstracts

In military language, a missile, also known as a guided missile, is a guided airborne ranged weapon capable of self-propelled flight usually by a jet engine or rocket motor. Missiles have four system components: targeting/guidance system, flight system, engine and warhead. Missiles come in types adapted for different purposes: surface-to-surface and air-to-surface missiles (ballistic, cruise, anti-ship, anti-tank, etc.), surface-to-air missiles (and anti-ballistic), air-to-air missiles, and anti-satellite weapons.

According to QYResearch's new survey, global Missiles market is projected to reach US\$ million in 2029, increasing from US\$ million in 2022, with the CAGR of % during the period of 2023 to 2029.

The global missiles market is expected to witness steady growth fueled by geopolitical tensions, military modernization efforts, and technological advancements. Ongoing innovation, integration of advanced technologies, collaborative partnerships, and emphasis on multi-role capabilities will shape the future of this market.
