Abstracts

This report studies the global Mist Collectors market status and forecast, categorizes the global Mist Collectors market size (value & volume) by manufacturers, type, application, and region. This report focuses on the top manufacturers in North America, Europe, Japan, China, India, Southeast Asia and other regions (Central & South America, and Middle East & Africa).

Mist collectors filter mist from the air generated by coolants and oils used during wet machining and metalworking processes. Uncollected coolant and machining oil mist can cause slippery floors and collect on machines, walls and ceilings, creating an unpleasant, high-maintenance working environment.

For industry structure analysis, the Mist Collector industry is not concentrated. These manufacturers range from large multinational corporations to small privately owned companies compete in this industry. The top five producers account for about 22 % of the revenue market. Regionally, Europe is the biggest production value area of valves, also the leader in the whole Mist Collector industry.

Asia-Pacific occupied 42.29% of the sales market in 2016. It is followed by Europe and North America, which respectively account for around 27.36% and 17.61% of the global total industry. Latin America and Mideast & Africa have a smaller market with 6.70% and 4.14% respectively in 2016.

For price trend analysis, a key variable in the performance of Mist Collector producers is raw material costs, specifically the speed at which any increase can be passed through to customers.

The global Mist Collectors market is valued at 250 million US\$ in 2017 and will reach 300 million US\$ by the end of 2025, growing at a CAGR of 2.5% during 2018-2025.
