Mobile DR is a high frequency combined digital X-ray medical diagnostic equipment. It is suitable for radiology department, orthopedics department, ward, emergency room, operating room, ICU and other places to meet the needs of digital photography of the head, limbs, chest cavity, spine, lumbar spine, abdomen and other parts of the body. It can be as flexible as bedside CR in wards, especially in the gerontology department and comprehensive wards. In addition, he can complete X-ray films of various complex body positions in ICU and operating room. It can even play an irreplaceable role in the emergency scene outside the hospital.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Mobile DR market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Mobile DR industry.

Based on our recent survey, we have several different scenarios about the Mobile DR YoY growth rate for 2020. The probable scenario is expected to grow by a xx% in 2020 and the revenue will be xx in 2020 from US\$ xx million in 2019.
