## Abstracts

Mobile Identification System is a pioneering service that allows users to embark on a simple and secure digital transformation journey. It has grown in popularity in both the government and industry, allowing users to safely recognize themselves on just about any internet-connected device. Because it can generate digital copies of documents such as national IDs, driving licenses, and passports, the mobile identification solution is progressively being seen as an automated verification service.

According to QYResearch's new survey, global Mobile Identification Solutions market is projected to reach US\$ 62260 million in 2029, increasing from US\$ 34560 million in 2022, with the CAGR of 8.8% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Mobile Identification Solutions market research.

According to our research, the global Electronic Components market is approximately USD 466.61 billion in 2022. The Asia-Pacific region is a major market for electronic components. The downstream application fields of the electronic components industry are extensive, including communication equipment, consumer electronics, automotive electronics, smart home, industrial control, military security and other fields. Unlike the strong industry demand in 2021, downstream industry demand in 2022 showed a differentiated trend. The demand for traditional electronic applications represented by mobile phones and computers has turned weak, which has a greater impact on the demand of the entire industry; the demand for communication equipment and data centers has maintained growth but slowed down, and the industrial and Internet of Things driven by digital transformation and the development of artificial intelligence technology. The steady growth of application demand and the accelerated development

of the new energy vehicle market can offset the decline in some consumer markets and provide support for long-term demand growth.
