Abstracts

Motherboard (sometimes alternatively known as the mainboard, system board, baseboard, planar board or logic board, or colloquially, a mobo) is the main printed circuit board (PCB) found in general purpose microcomputers and other expandable systems. It holds and allows communication between many of the crucial electronic components of a system, such as the central processing unit (CPU) and memory, and provides connectors for other peripherals. Unlike a backplane, a motherboard usually contains significant sub-systems such as the central processor, the chipset's input/output and memory controllers, interface connectors, and other components integrated for general-purpose use.

Asus was the global greatest manufacturer in the Motherboard industry, accounted for 13% revenue share in the global market, followed by Gigabyte Technology, Super Micro, Micro-Star International Co., Ltd, Advantech, Intel, Tyan (MiTAC), Kontron, Abaco, ASRock, Artesyn Embedded, Colorful Group, Curtiss Wright Controls, ADLINK, DFI, Maxsun, ONDA, Biostar. The top 5 companies had a combined revenue share of about 31% of the global total. China was the world's largest consumption and production area in 2018.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Motherboard 4900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
