Motorcycle Carburetor is the device inside an internal combustion engine of motorcycle that provides the area for air and gasoline to mix them together so that the engine runs properly.

If there is not enough fuel mixed with the air, the engine 'runs lean' and either will not run or potentially damages the engine. If there is too much fuel mixed with the air, the engine 'runs rich' and either will not run (it floods), runs very smoky, runs poorly (bogs down, stalls easily), or at the very least wastes fuel.

Due to the technology progress, motorcycle carburetor technology is being replaced by electric fuel injection technology. In the future, carburetor will slowly withdraw from the market. While in the last several years, India Motorcycle Carburetor market enjoyed a fast development due to the rapid growth of motorcycle production. In 2016, though the cash crunch, following the demonetising of Rs 500 and Rs 1,000 currency notes, India sales of Motorcycle Carburetor also as high as 27 million units. In the next few years, the market of India Motorcycle Carburetor will keep in a stable growth state.

The classification of Motorcycle Carburetor includes Diaphragm Carburetor and Float-Feed Carburetor, due to the better performance and efficiencies, the Diaphragm Carburetor will witness a much higher growth rate than the Float-Feed Carburetor in the next six years. The market share of Diaphragm Carburetor is expected to reach 31.77% in 2022.
