Laser micromachining encompasses many processes including laser cutting, laser drilling, laser ablation, laser scribing, laser texturing as well as advanced laser machining processes.

Multi-access Laser Micromachining provides maximum micromachining flexibility by supporting up to two or more laser types in a single workstation.

In the Multi-access Laser Micromachining System, lasers can be selected to be optimized for both tasks, with the shared workstation elements of part positioning, control and automation delivering highly precise machining of a vast array of materials. The global Multi-access Laser Micromachining industry mainly concentrates in Europe and the USA. In the coming five years, China will be another production region. The global leading players in this market are 3D-Micromac AG, M-SOLV, Lasea, IPG Photonics Corporation, ESI and 4JET microtech GmbH & Co. KG, which total production value is \$40.70 million, accounts for 88.54% of total production value in 2015.
