Abstracts

Muscle relaxers are a group of drugs that have a sedative effect and may be prescribed for back, neck, and other musculoskeletal pain.

According to QYResearch's new survey, global Muscle Relaxers market is projected to reach US\$ 5065.3 million in 2029, increasing from US\$ 3740 million in 2022, with the CAGR of 4.4% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Muscle Relaxers market research.

According to a study of Global Burden of Disease (GBD) 2021 data, 1.71 billion individuals globally suffer from musculoskeletal diseases, such as osteoarthritis, rheumatoid arthritis, neck discomfort, low back pain, fractures, and other injuries. People of all ages are afflicted by musculoskeletal problems; however, the prevalence varies by age and diagnosis. With over 149 million years lived with disability (YLDs), or 17% of all YLDs worldwide, musculoskeletal diseases are the main cause of YLDs. The need for muscle relaxants drugs is also being driven by the growing geriatric population, as this group is more vulnerable to illnesses including back pain, muscular tightness, and muscle spasms, especially those connected to injuries to the spine. As a result of this disease muscle relaxants are more in demand, which further drives market growth. For instance, 1 in 6 people worldwide will be 60 or older by 2030. The number of individuals in the world who are 60 or older will double (to 2.1 billion) by 2050. Between 2020 and 2050, the number of people 80 or older is projected to triple, reaching 426 million.
