Abstracts

This report studies the global MVR Evaporator market status and forecast, categorizes the global MVR Evaporator market size (value & volume) by manufacturers, type, application, and region. This report focuses on the top manufacturers in North America, Europe, Japan, China, India, Southeast Asia and other regions (Central & South America, and Middle East & Africa).

Mechanical Vapor Re-Compression (MVR), sometimes referred to as Mechanical Vapor Compression (MVC), is a highly efficient process using mechanical energy input to achieve evaporation and condensation. The fundamental difference between the vapor compression unit and the conventional evaporator is that the latent heat of vaporization is fully utilized in the vapor compression evaporator. Since the evaporator also serves as the condenser, essentially all of the latent heat is recycled, with no rejection of heat to cooling water. The evaporation takes place on a thin-film heat transfer surface where steam condenses on one side and water boils on the other side.

As Chinese overall economic downward trend in the past few years, and international economic situation is complicated, in the next few years there will be many uncertainties, and coupled with MVR Evaporator industry in short supply on the market in the past few years, more and more companies enter into MVR Evaporator industry, the current demand for MVR Evaporator product is relatively low, lack of demand, excess supply.

As large demand of high-end products at home and abroad, many companies began to enter the field of high-end. Currently, the Chinese MVR Evaporator industry is not only begin to transit to high-end MVR Evaporator products, while still extend in the resource-rich land and downstream industry chain.

Although sales of MVR Evaporator brought a lot of opportunities, the study group recommends the new entrants just having money but without technical advantage and downstream support do not to enter into the MVR Evaporator field.

The global MVR Evaporator market is valued at 2930 million US\$ in 2017 and will reach 3830 million US\$ by the end of 2025, growing at a CAGR of 3.9% during 2018-2025.
