Abstracts

According to QYResearch's new survey, global Nanometer ZnO market is projected to reach US\$ 466.2 million in 2029, increasing from US\$ 335 million in 2022, with the CAGR of 5.3% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Nanometer ZnO market research.

Since 2020, the epidemic caused by the new coronavirus has broken out and spread around the world. The shutdown and production reduction brought about by the epidemic prevention and control will increase the risk of the global supply chain. Fear of a crisis. The short-term domestic and foreign economies are full of uncertainties, and zinc oxide products are under operating pressure from raw material supply to downstream consumer demand. Relevant departments should further strengthen the overall coordination of raw materials, processes and production links, scientifically formulate monthly procurement plans, ensure that the inventory of mineral powder is kept within a reasonable range, and minimize capital occupation. Intensify efforts in market development, and strictly control the risk of prepaid funds and transit consumption. In 2022, the global nano zinc oxide market is mainly led by China; Europe is the second largest market by volume. In the field of consumption, the current domestic consumption of nano-zinc oxide is mainly used in the rubber industry. In the field of rubber application, automobile and traffic tires are the main applications. As the resumption of work and production in various industries continues to advance, the sales of the domestic automobile industry, especially the heavy truck market, have shown a significant recovery trend, which will continue to promote the growth of demand for nano-zinc oxide.
