## Abstracts

Naturally occurring diacetyl (non-synthetic form) is an organic compound that arises naturally as a by-product from the fermentation process of many foods, fruits, and vegetables. This compound can be found in beverages such as butter, kombucha, wine, beer, and cultured foods.

Production of natural diacetyl is through extraction or fermentation. According to research, there are two standards for the products, EU Natural and USA Natural.

EU Natural means natural diacetyl is extracted from plants while USA Natural means the raw materials of diacetyl are got from fermentation, such as natural acetaldehyde.

Currently, the fermentation method is more common than extraction one.
