## Abstracts

Neurostimulation is a therapeutic activation of part of the nervous system using microelectrodes. The electrodes are used to interface with excitable tissue in order to either restore sensation, such as a cochlear implant for hearing, or control an organ, such as a heart pacemaker.

The global average price of implantable neurostimulation devices is in the fluctuating trend, 22.10 K USD/Unit in 2012 to 21.24 K USD/Unit in 2016. With the situation of global economy, prices will be in decreasing trend in the following five years.

The classification of implantable neurostimulation devices includes spinal cord stimulation (SCS), gastric electric stimulation (GES), deep brain stimulation (DBS), sacral nerve stimulation (SNS), vagus nerve stimulation (VNS) and other type, and the proportion of spinal cord stimulation (SCS) in 2016 is about 57%, and the proportion is in increasing trend from 2012 to 2016.

Implantable neurostimulation devices are widely used to treat pain management, parkinson's disease, urinary and fecal incontinence, epilepsy, gastroparesis and other field. The most proportion of implantable neurostimulation devices is used for pain management, and the consumption proportion in 2016 is about 55%.

North America region is the largest supplier of implantable neurostimulation devices, with a production market share nearly 82% in 2016. Europe is the second largest supplier of implantable neurostimulation devices, enjoying production market share nearly 12% in 2016.

North America is the largest consumption place, with a consumption market share nearly 42% in 2016. Following North America, Europe is the second largest consumption place with the consumption market share of 31%.
