Abstracts

Nickel hydroxide is a green, crystalline, inorganic compound that produces toxic gases upon heating. It is generally used in rechargeable battery electrodes, by oxidation to nickel(III) oxide-hydroxide. Nickel hydroxide is denoted by Ni (OH)₂ and is an insoluble chemical compound having strong redox properties.

In consumption market, the growth rate of global consumption is smooth relatively.

China and Europe are the mainly consumption regions due to rapid development of economy. China captures about 53.79% of global consumption production and Europe is the second-largest region-wise market with 18.19% global production share.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Nickel Hydroxide 3900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Nickel Hydroxide 3900 industry.
