Abstracts

This report studies the global Nickelous Sulfate market status and forecast, categorizes the global Nickelous Sulfate market size (value & volume) by key players, type, application, and region.

This report focuses on the top players in North America, Europe, China, Japan, Southeast Asia India and Other regions (Middle East & Africa, Central & South America).

Nickelous Sulfate, usually refers to the inorganic compound with the formula $\text{NiSO}_4(\text{H}_2\text{O})_6$. This highly soluble blue-coloured salt is a common source of the Ni^{2+} ion for electroplating. At least seven Sulfate salts of nickel (II) are known. These salts differ in terms of their hydration or crystal habit.

The common tetragonal hexahydrate crystallizes from aqueous solution between 30.7 and 53.8 °C. Below these temperatures, a heptahydrate crystallises, and above these temperatures an orthorhombic hexahydrate forms. The yellow anhydrous form, NiSO_4 , is a high melting solid that is rarely encountered in the laboratory. This material is produced by heating the hydrates above 330 °C. It decomposes at still higher temperatures to nickel oxide.

X-ray crystallography measurements show that $\text{NiSO}_4 \cdot 6\text{H}_2\text{O}$ consists of the octahedral $[\text{Ni}(\text{H}_2\text{O})_6]^{2+}$ ions. These ions in turn are hydrogen bonded to Sulfate ions. Dissolution of the salt in water gives solutions containing the aquo complex $[\text{Ni}(\text{H}_2\text{O})_6]^{2+}$.

All nickelous sulfates are paramagnetic.

Nickelous sulfate industry is relatively fragmented, manufacturers are mostly in the China, Taiwan, Japan and Europe. As for output value, Europe and North America output value accounted for more than 60.38% of the total output value of global nickelous sulfate market. Norilsk Nickel is the world leading manufacturer in global nickelous sulfate market with the market share of 14.80%, in terms of revenue.

In the past few years, as the main raw material price was not stable, with the decrease in production capacity, expected that the nickelous sulfate raw material price might be slightly higher in the short term. Moreover, the improvement of energy, transportation

costs, and labor costs, will play a significant role in promoting the cost of nickelous sulfate.

There are companies adding new capacities and aims at the cost and quality leadership which shall improve profitability. As the same time, companies are focusing on technological innovation, equipment upgrades, and process improvements, to reduce costs and improve quality.

The global Nickelous Sulfate market is valued at 1830 million US\$ in 2017 and will reach 2500 million US\$ by the end of 2025, growing at a CAGR of 4.0% during 2018-2025.
