## Abstracts

OPDIVO® (nivolumab) is a prescription medication that treats certain types of cancer.

According to QYResearch's new survey, global Nivolumab Drugs market is projected to reach US\$ 15620 million in 2029, increasing from US\$ 9567 million in 2022, with the CAGR of 6.8% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Nivolumab Drugs market research.

The OPDIVO market is primarily driven by the growing demand for innovative immunotherapy treatments in the field of oncology. OPDIVO (nivolumab) is a checkpoint inhibitor that harnesses the immune system to fight cancer cells by blocking certain proteins that suppress the immune response. The increasing prevalence of cancer cases, coupled with the need for targeted therapies that offer improved survival rates and fewer adverse effects compared to traditional treatments, contributes to market growth. Moreover, the expanding range of approved indications for OPDIVO, including advanced melanoma, lung cancer, and other malignancies, further propels adoption. However, challenges include managing potential immune-related adverse events and addressing variations in patient responses to immunotherapy. Navigating the competitive landscape in the immunotherapy market and ensuring affordability and access to these treatments for a broader patient population pose ongoing concerns. The market's success hinges on continuous research to identify optimal treatment combinations and patient profiles for OPDIVO, comprehensive patient education about potential benefits and risks, and collaborations between pharmaceutical companies, healthcare providers, and research institutions to optimize cancer treatment while addressing the evolving challenges associated with OPDIVO therapy.
