Abstracts

A non-stick surface is a surface engineered to reduce the ability of other materials to stick to it. Non-stick cookware is a common application, where the non-stick coating allows food to brown without sticking to the pan. Non-stick is often used to refer to surfaces coated with polytetrafluoroethylene (PTFE), a well-known brand of which is 'Teflon.' In the twenty-first century other coatings have been marketed as non-stick, such as anodized aluminium, ceramics, silicone, enameled cast iron, and seasoned cookware.

Non-stick surfaces are mainly coated with a synthetic polymer called polytetrafluoroethylene (PTFE), also known as Teflon, a DuPont brand trademark. Other coatings have been marketed as non-stick, such as anodized aluminium, ceramics, silicone, enameled cast iron. But as the awareness of environmental protection and individual health, the ceramics and silicone market share will increase largely.
