Abstracts

Nonwoven Composites refers to the products produced by a combination of one or more nonwoven fabric/technology with other materials/technology to make a better performing whole with the properties of the parts. The composites can be produced from the combination of any of the webs of spunbond, meltblown, wet-laid, dry-laid and other webs produced from nonwoven manufacturing processes.

The term composites originally arose when two or more materials were combined or bonded together to form a heterogeneous mixture in order to rectify some shortcoming of a particularly useful component.
