Abstracts

α -Chloralose (CAS 15879-93-3) is a white to light white powder with a molecular formula of $C_8H_{11}Cl_3O_6$. It is mainly used in laboratory animals as an anesthetic.

According to QYResearch's new survey, global α -Chloralose market is projected to reach US\$ million in 2029, increasing from US\$ million in 2022, with the CAGR of % during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole α -Chloralose market research.

α -Chloralose is a widely used anesthetic drug in the veterinary and laboratory research sectors, particularly significant in the field of animal sedation and anesthesia. Despite facing competition from some alternative drugs in recent years, it still holds a prominent position in the veterinary pharmaceutical market due to its safety and effectiveness across various animal species. The market size is relatively modest, primarily concentrated in laboratory and veterinary domains. With the continued expansion of the veterinary healthcare market and sustained demand for laboratory research, α -Chloralose is expected to maintain a stable market position in the future. However, it may require ongoing optimization in terms of safety and environmental concerns to address intense market competition and regulatory requirements.
