O-Cresol (CAS 95-48-7) is an organic compound with the formula $\text{CH}_3\text{C}_6\text{H}_4(\text{OH})$. It is widely used intermediate in the production of other chemicals. It is a derivative of phenol and is an isomer of p-cresol and m-cresol.

O-Cresol (CAS 95-48-7) is an important chemical intermediate, there are two main methods to produce o-cresol including extraction process (coal tar as material) and synthesis process (phenol and methanol as materials). In order to decrease the cost and increase the profit, the extraction process now is mainly adopted to produce o-cresol. In 2016, about 60.86% of the global production was produced by extraction process. O-Cresol can be applied into many fields such as resin, herbicides, disinfectant and others, the resin is the main applied field in the world. In 2016, 23365 MT was used to synthesize resin, taking 46.01% of the global production.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the O-Cresol 3900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
