## Abstracts

Obeticholic acid is a semi-synthetic bile acid analogue which has the chemical structure 6 $\alpha$ -ethyl-chenodeoxycholic acid.

According to QYResearch's new survey, global Obeticholic Acid Drug market is projected to reach US\$ 240.4 million in 2029, increasing from US\$ 309 million in 2022, with the CAGR of -2.4% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Obeticholic Acid Drug market research.

The Ocaliva market is primarily driven by the urgent need for effective treatments for primary biliary cholangitis (PBC), a chronic liver disease that affects the bile ducts. Ocaliva, also known as obeticholic acid, is a medication used to manage PBC and improve liver function. The increasing prevalence of PBC, coupled with advancements in hepatology research and the focus on liver health, contributes to market growth. Moreover, the demonstrated benefits of Ocaliva in reducing serum alkaline phosphatase levels and delaying disease progression further propel adoption. However, challenges include managing potential side effects, optimizing dosing for individual patients, and addressing potential drug interactions. Navigating patient-specific treatment needs, ensuring long-term safety, and providing comprehensive monitoring are ongoing concerns. The market's success relies on continuous research in liver diseases, collaborations between pharmaceutical manufacturers and hepatologists, and comprehensive patient education on the benefits and potential risks of Ocaliva treatment while addressing the evolving challenges associated with liver disease management and treatment accessibility.
