Abstracts

Excipients are important part of the drug development process and ensure that the formulation remains stable throughout the development process as well when it is administered. It is basically any other component of the drug outside the medicinal component as it acts as a vehicle or a carrier for the medicinal product. This way stability to the formulation is provided. Wrong selection of excipient can lead to complications like intoxication of the patients. In ocular drugs, they play an important role in maintaining the tonicity, pH, stability, viscosity and sterility of the formulation.

According to QYResearch's new survey, global Ocular Drug Excipient market is projected to reach US\$ 1302.5 million in 2029, increasing from US\$ 863 million in 2022, with the CAGR of 6.1% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Ocular Drug Excipient market research.

The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for development of pharmaceutical manufacturing segments and rise in R&D activities for drugs. However, the industry also faces challenges such as stringent regulations, high costs of research and development, and patent expirations. Companies need to continuously innovate and adapt to these challenges to stay competitive in the market

and ensure their products reach patients in need. Additionally, the COVID-19 pandemic has highlighted the importance of vaccine development and supply chain management, further emphasizing the need for pharmaceutical companies to be agile and responsive to emerging public health needs.
