Abstracts

The OLED (Organic Light Emitting Diode) is a brighter, higher contrast display that has faster response times, wider viewing angles and consumes less power than conventional VFD, LED or Liquid Crystal Displays. OLED displays are self-illuminating due to their organic material and require no backlight for maximum visibility in all environments.

OLED Displays are made up of a layer of organic material placed between two conductors. These two conductors (an anode and a cathode) are then between a glass top plate (seal) and a glass bottom plate (substrate). When an electric current is applied to the two conductors, the organic material produces a bright, electro-luminescent light. When energy passes from the negatively charged layer (cathode) to the other (anode) layer, it stimulates the organic material between the two, which in turns emits lights that is visible through the outermost layer of glass.

At present, the OLED Display industry is still in the developing stage, the world's large production is mainly concentrated in Korea. The technology and market share is monopolized by Samsung and LG. Many manufacturers are in the research level and begin to mass production in 2015, Like EDO, established in 2012 in china, announce the AMOLED Display capacity is 15K/month. And JOLED Inc., joint venture of Japan Display, Sony and Panasonic, which set up to break the monopoly of Samsung and LG, JOLED will mainly target laptops and tablets.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the OLED Display 4900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its

financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the OLED Display 4900 industry.

Based on our recent survey, we have several different scenarios about the OLED Display 4900 YoY growth rate for 2020. The probable scenario is expected to grow by a xx% in 2020 and the revenue will be xx in 2020 from US\$ 42490 million in 2019. The market size of OLED Display 4900 will reach xx in 2026, with a CAGR of xx% from 2020 to 2026.
