Abstracts

Optical coherence tomography (OCT), the most widely used optical medical imaging technology, can be used in the non-destructive testing (NDT) and inspection arena. Valued for its ability to provide non-contact imaging of surface morphology and subsurface structure with micron-level resolution, the technique can provide quantitative analysis of structure, features, and defects for a wide range of materials. It is also rapid; 3D images may be captured in within few seconds, or a cross-section can be monitored at faster than video rates for real-time manufacturing or process control feedback.

According to QYResearch's new survey, global Optical Coherence Tomography for Industrial market is projected to reach US\$ 2127.3 million in 2029, increasing from US\$ 1253 million in 2022, with the CAGR of 7.9% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Optical Coherence Tomography for Industrial market research.

According to our "Construction Machinery" research center, sales of construction machinery in Europe increased by 24% in 2021, and in 2022 the construction machinery revenue in Europe was about US\$ 22 billion, while the US market sold about \$36 billion in construction machinery in 2022. China's construction machinery has complete categories and outstanding advantages, with 20 categories, 109 groups, 450 models, 1090 series and tens of thousands of models of product equipment. By the end of 2021, the number of major products of construction machinery in China was about 5.61 million to 6.08 million units. According to our "Construction Machinery" research center, the total sales of the top 50 global construction machinery manufacturers in 2022 reached US\$ 220 billion. And Asian companies occupied an absolute advantage, accounting for

50% of revenue, followed by Europe and North America, accounting for 26% and 23%.
