Abstracts

Optical fiber preform, or fiber preform, is a kind of silica glass rod which has a special refractive index of profile. It is used to produce optical fiber.

In China, the high-end Optical Fiber Preform materials mainly rely on import from foreign developed countries, like US, Germany, Japan. To meet the large demand for the high-end products, Chinese manufacturers will invest much more on the R&D, which will certainly weaken the dependence of imports.

As large demand of at home and abroad, many companies began to enter the field of high-end. Currently, the Chinese Optical Fiber Preform industry is not only begin to transit to Optical Fiber Preform products, while still extend in the resource-rich land and downstream industry chain.

Although sales of Optical Fiber Preform brought a lot of opportunities, the study group recommends the new entrants just having money but without technical advantage and downstream support do not to enter into the Optical Fiber Preform field.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
