Abstracts

The outdoor payment terminal (OPT) uses the card machine connection technology to realize the self-service card refueling of the outdoor fuel card, providing convenient self-service for the refueling customer. The product can be installed in the tanker or independent of the tanker. It is convenient for the refueling customer to select the oil gun, quantitative/fixed amount and other operations for self-fueling through the touch screen guide menu. The outdoor payment terminal technology is the general trend of the development of self-service fueling technology. The customer service has the defect that the traditional card machine linkage payment module and the station-level background can not be connected to the line, so it has more business advantages, such as: support multi-oil price, etc. Flexible promotion, refueling transaction records are not lost, and these are difficult problems that cannot be solved by traditional card machine linkage.

The leading companies own the advantages on better performance, more abundant product's types, better technical and impeccable after-sales service. Consequently, they take the majority of the market share of high-end market. Looking to the future years, the slow downward price trend in recent years will maintain. As competition intensifies, prices gap between different brands will go narrowing. Similarly, there will be fluctuation in gross margin.
