## Abstracts

Common bleaching powder is prepared by combining calcium hypochlorite, calcium hydroxide, and calcium chloride. Among these, calcium hypochlorite is a recognized dye and is widely considered as a type of chlorine-based bleaching agent. Bleaching agents are generally either oxidizers or reducers. Oxidizing bleaching specialists constitute a significant part of dying agents.

According to QYResearch's new survey, global Oxidizing and Bleaching Agent market is projected to reach US\$ 1724.2 million in 2029, increasing from US\$ 1035 million in 2022, with the CAGR of 7.6% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Oxidizing and Bleaching Agent market research.

Chemical is an important driver of this industry. Emerging economies, particularly in Asia and Latin America, are experiencing rapid industrialization, urbanization, and population growth. This drives the demand for bulk chemicals across various sectors, including construction, automotive, electronics, agriculture, and consumer goods. The rising middle class in these regions is also contributing to increased consumption of chemical products.
