P-Aminobenzamide (CAS 2835-68-9) is a white powder with the molecular formula $C_7H_8N_2O$. It is mainly used as organic pigment intermediates and pharmaceutical intermediates.

According to QYResearch's new survey, global P-Aminobenzamide market is projected to reach US\$ 44 million in 2029, increasing from US\$ 32 million in 2022, with the CAGR of 4.8% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole P-Aminobenzamide market research.

P-Aminobenzamide, an essential organic synthetic intermediate, finds widespread applications in the pharmaceutical, dye, and agrochemical industries. The market demand is consistently increasing, primarily due to its critical role in drug synthesis and expanding applications in the dye industry. Its specific uses in cancer drug synthesis, organic synthesis, and high-end dye production are expected to drive further market growth. Future developments may include process optimization to enhance production capacity and reduce costs, while aligning with the trends of greener and more environmentally friendly practices, and continuous exploration of new application areas.
