P-Toluidine (CAS 106-49-0) is a colorless, shiny flake crystal with the molecular formula C₇H₉N. It is mainly used as a dye intermediate, and also as an intermediate for products such as pyrimethamine, pesticide sulfuron and so on.

According to QYResearch's new survey, global P-Toluidine market is projected to reach US\$ million in 2029, increasing from US\$ million in 2022, with the CAGR of % during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole P-Toluidine market research.

P-Toluidine, also known as para-toluidine, is an important organic compound with wide applications in the chemical, pharmaceutical, and dye industries. Its market size is substantial, primarily driven by its extensive use in the dye and rubber sectors. Based on historical sales data and forecasts, P-Toluidine's revenue has shown steady growth, and it is expected to continue this positive trend in the coming years, particularly fueled by industrial development in the Asian region. Specific uses include serving as an intermediate in dye synthesis, pharmaceuticals, and as a promoter in rubber processing. Future developments may focus on improving production processes, cost reduction, exploring new application areas to meet environmental and sustainability demands.
