## Abstracts

Paclitaxel Injection is a kind of anti-cancer injection taking paclitaxel API as raw material. It is mainly used in breast cancer, ovarian cancer and other cancers. Paclitaxel injection comes as a liquid to be given intravenously (into a vein) by a doctor or nurse in a hospital or clinic. It is usually given once every 3 weeks. When paclitaxel injection manufactured with polyoxyethylated castor oil is used to treat Kaposi's sarcoma, it may be given once every 2 or 3 weeks.

In recent years, the growing population and increasing disease incidence of ovarian cancer, breast cancer and other cancers drive the global paclitaxel injection industry developing.

In the past five years from 2010-2014, global paclitaxel injection industry developed fast with a larger than 15% annual production growth rate. In China, due to the late start, the production growth rate is 12%~17%, which is a little lower than global average.

In the next few years, with the growing attention on women cancers from the whole society and much larger investment on R&D of paclitaxel injection, this industry will continue developing at a high speed. What's more, because of the high gross profit of producing and selling paclitaxel injection, more and more investors will enter into this industry.

At present, the production of paclitaxel injection mainly concentrated in US, China and EU, the three regions produced about 77.30% of the global total products. Of those, US are the largest production region with a 42.69% of global production market share.

In the future, with the expanded capacity of paclitaxel injection, the manufacturers will face the high risk of price and gross margin decline.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Paclitaxel

Injection 3900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Paclitaxel Injection 3900 industry.

Based on our recent survey, we have several different scenarios about the Paclitaxel Injection 3900 YoY growth rate for 2020. The probable scenario is expected to grow by a xx% in 2020 and the revenue will be xx in 2020 from US\$ 2720.1 million in 2019. The market size of Paclitaxel Injection 3900 will reach xx in 2026, with a CAGR of xx% from 2020 to 2026.
