Abstracts

This report studies the global Paclitaxel Injection market status and forecast, categorizes the global Paclitaxel Injection market size (value & volume) by manufacturers, type, application, and region. This report focuses on the top manufacturers in North America, Europe, Japan, China, India, Southeast Asia and other regions (Central & South America, and Middle East & Africa).

Paclitaxel Injection is a kind of anti-cancer injection taking paclitaxel API as raw material. It is mainly used in breast cancer, ovarian cancer and other cancers.

Paclitaxel injection comes as a liquid to be given intravenously (into a vein) by a doctor or nurse in a hospital or clinic. It is usually given once every 3 weeks. When paclitaxel injection manufactured with polyoxyethylated castor oil is used to treat Kaposi's sarcoma, it may be given once every 2 or 3 weeks.

In recent years, the growing population and increasing disease incidence of ovarian cancer, breast cancer and other cancers drive the global paclitaxel injection industry developing.

In the past five years from 2010-2014, global paclitaxel injection industry developed fast with a larger than 15% annual production growth rate. In China, due to the late start, the production growth rate is 12%~17%, which is a little lower than global average.

In the next few years, with the growing attention on women cancers from the whole society and much larger investment on R&D of paclitaxel injection, this industry will continue developing at a high speed. What's more, because of the high gross profit of producing and selling paclitaxel injection, more and more investors will enter into this industry.

At present, the production of paclitaxel injection mainly concentrated in US, China and EU, the three regions produced about 77.30% of the global total products. Of those, US are the largest production region with a 42.69% of global production market share.

In the future, with the expanded capacity of paclitaxel injection, the manufacturers will

face the high risk of price and gross margin decline.

The global Paclitaxel Injection market is valued at 2180 million US\$ in 2017 and will reach 4560 million US\$ by the end of 2025, growing at a CAGR of 11.1% during 2018-2025.
