## Abstracts

Dry strength additives are used in paper mills in order to increase the strength of the paper. They improve strength of the paper by increasing the internal bond formation and enhance the burst strength, wax pack values, stiffness, tear strength, and folding endurance. Dry strength additives also enable manufacturers to optimize paper properties at lower cost.

According to QYResearch's new survey, global Paper Dry Strength Additive market is projected to reach US\$ 7769.8 million in 2029, increasing from US\$ 5362 million in 2022, with the CAGR of 5.5% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Paper Dry Strength Additive market research.

Chemical is an important driver of this industry. Emerging economies, particularly in Asia and Latin America, are experiencing rapid industrialization, urbanization, and population growth. This drives the demand for bulk chemicals across various sectors, including construction, automotive, electronics, agriculture, and consumer goods. The rising middle class in these regions is also contributing to increased consumption of chemical products.
