An implanted port (also known as a “port”) is like an artificial vein. It will make it easier for doctors and nurses to access the blood vessels for medications and tests.

A port is a small medical appliance that is installed beneath the skin. A catheter connects the port to a vein. Under the skin, the port has a septum through which drugs can be injected and blood samples can be drawn many times, usually with less discomfort for the patient than a more typical 'needle stick'.

In this report, we study the implantable port used for pediatric.

The global average price of Pediatric Implantable Port is in the decreasing trend, from 164 USD/Unit in 2011 to 158 USD/Unit in 2015. With the situation of global economy, prices will be in decreasing trend in the following five years.

The global Pediatric Implantable Port market is valued at 73 million US\$ in 2017 and will reach 100 million US\$ by the end of 2025, growing at a CAGR of 5.0% during 2018-2025.
