Abstracts

This report studies the global PEGylated Proteins market status and forecast, categorizes the global PEGylated Proteins market size (value & volume) by manufacturers, type, application, and region. This report focuses on the top manufacturers in North America, Europe, Japan, China, India, Southeast Asia and other regions (Central & South America, and Middle East & Africa).

PEGylating has been widely used as a post-production modification methodology for improving biomedical efficacy and physicochemical properties of therapeutic proteins since the first PEGylated product was approved by Food and Drug Administration in the early 1990s.

The threat of substitutes arises when there are similar products developed by competitors which satisfy the market needs. When consumers have access to substitute products which can satisfy their market needs, then manufacturers and suppliers lose their bargaining power. Consumers are able to purchase competitor's products if they are not satisfied with product price or quality. In order for suppliers to tackle the challenge of threat of substitutes, they have to innovate products which meet the needs of their target market segments.

The global PEGylated Proteins market is valued at 3230 million US\$ in 2017 and will reach 4180 million US\$ by the end of 2025, growing at a CAGR of 3.8% during 2018-2025.
