Abstracts

Peptone is a water-soluble complex which is derived from hydrolysis during the protein digestion process. It is an organic compound and an excellent source of organic nitrogen, peptides, and proteins in the growth of the microorganisms and cells. They are derived from various sources such as meat, casein, gelatin, soy, pea, wheat, potato, and other proteins. Peptones are obtained by partially break down of proteins either by acid hydrolysis or by enzymes into short peptides and amino acids. Peptone composition depends on the source of the protein and digestion process these factors determine the relative prevalence of amino acids and peptides.

According to QYResearch's new survey, global Peptone Powder market is projected to reach US\$ 1463 million in 2029, increasing from US\$ 812 million in 2022, with the CAGR of 8.8% during the period of 2023 to 2029.
