Abstracts

Perfluoropolyether grease are special grade synthetic lubricants, which possess superior properties as compared to petroleum based lubricants. Most of the petroleum based lubricants fail to perform under -18°C and above 100°C ; the perfluoropolyether grease can effectively perform between -90°C and 300°C . Apart from extensive temperature endurance, significant endurance under high load conditions, hydrophobic nature, chemical inertness, oxidation resistant, etc. are some other important properties of perfluoropolyether grease.

According to QYResearch's new survey, global Perfluoropolyether Grease market is projected to reach US\$ 355.3 million in 2029, increasing from US\$ 280 million in 2022, with the CAGR of 3.5% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Perfluoropolyether Grease market research.

At present, there are not many manufacturers of perfluoropolyethers with mature technology and large-scale manufacturing capacity in the world, and the competitive advantage of these enterprises in the industry is indisputable, and they absolutely have a monopoly in the maturity of technology, upstream and downstream support, process optimization, complete product categories, rich application technology and service level. Therefore, there is a technological monopoly in the perfluoropolyether industry. These enterprises mainly include Chemours, Solvay, Daikin, DuPont, Klüber Lubrication, Fusav.
