## Abstracts

The fluorinated lubricants are fluorocarbon ether polymers of polyhexafluoropropylene oxide. Fluorinated lubricants are also known as perfluoropolyether (PFPE), perfluoropolyalkylether (PFPAE), and perfluoroalkylether (PFAE). Owing to the inherent inertness, the PFPE is an outstanding lubricant to be used in reactive and aggressive environments that require direct contact between lubricant and reactive chemicals such as hydrazine, nitric acid or liquid and gaseous chlorine.

According to QYResearch's new survey, global Perfluoropolyether Lubricant market is projected to reach US\$ 1017.8 million in 2029, increasing from US\$ 802 million in 2022, with the CAGR of 3.5% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Perfluoropolyether Lubricant market research.

At present, there are not many manufacturers of perfluoropolyethers with mature technology and large-scale manufacturing capacity in the world, and the competitive advantage of these enterprises in the industry is indisputable, and they absolutely have a monopoly in the maturity of technology, upstream and downstream support, process optimization, complete product categories, rich application technology and service level. Therefore, there is a technological monopoly in the perfluoropolyether industry. These enterprises mainly include Chemours, Solvay, Daikin, DuPont, Klüber Lubrication, Fusav.
