Abstracts

The Personal Radiation Dosimeter is of fundamental importance in the disciplines of radiation dosimetry and radiation health physics and is primarily used to estimate the radiation dose deposited in an individual wearing the device. For active type product?the revenue comes from the products sold to customers. For passive dosimetry methods such as TLD,OSL ?RPL, many players in the market earn money not only through the sales of dosimeters but also with service at the same time. For the OSL dosimeters, the products can be reused even for more than 10 years, so major players often package products and services for sale. So in this report we measure the market mainly through the products and service revenue segment.

The major manufacturers in the industry are Fluke Corporation, Chiyoda Technol Corporation and Mirion Technologies, with revenues accounting for 22.37%, 16.58% and 11.31% respectively in 2019.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Personal Radiation Dosimeter market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
