1 Phosphorus Fertilizer Market Overview

1.1 Product Overview and Scope of Phosphorus Fertilizer

All phosphate fertilizers are obtained by extraction from minerals containing the anion PO_4^{3-} . In rare cases, fields are treated with the crushed mineral, but most often more soluble salts are produced by chemical treatment of phosphate minerals. The most popular phosphate-containing minerals are referred to collectively as phosphate rock. The main minerals are fluorapatite $\text{Ca}_5(\text{PO}_4)_3\text{F}$ (CFA) and hydroxyapatite $\text{Ca}_5(\text{PO}_4)_3\text{OH}$. These minerals are converted to water-soluble phosphate salts by

treatment with sulfuric or phosphoric acids. The large production of sulfuric acid as an industrial chemical is primarily due to its use as cheap acid in processing phosphate rock into phosphate fertilizer. The global primary uses for both sulfur and phosphorus compounds relate to this basic process.
