Abstracts

Phycobiliprotein are water-soluble proteins present in cyanobacteria and certain algae, for example rhodophytes, cryptomonads, glaucocystophytes, that capture light energy, which is then passed on to chlorophylls during photosynthesis. Phycobiliproteins are formed of a complex between proteins and covalently bound phycobilins that act as chromophores. They are most important constituents of the phycobilisomes.

Scientific research shows that the phycobiliprotein can be used as a natural pigment of food, cosmetics, dyes and other industries. It also can be made into a fluorescent reagent using in clinical medical diagnosis, immune chemical and biological engineering research field. In a word, it has wide range of applications, high development and utilization value. But because of low market awareness and high price, its application market is still immature. Phycobiliprotein's present value is about 1522 million dollars in worldwide in 2015.

According to our survey, Dainippon Ink and Chemicals from Japan is one of the earliest companies researching and manufacturing phycobiliprotein. So Japan is the biggest supplier of phycobiliprotein depending on mature technology and enough raw materials like spirulina naturally cultured. It occupies relatively large market share at about 28%. Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Phycobiliprotein 3900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events

restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Phycobiliprotein 3900 industry.

Based on our recent survey, we have several different scenarios about the Phycobiliprotein 3900 YoY growth rate for 2020. The probable scenario is expected to grow by a xx% in 2020 and the revenue will be xx in 2020 from US\$ 44 million in 2019. The market size of Phycobiliprotein 3900 will reach xx in 2026, with a CAGR of xx% from 2020 to 2026.
