This report studies the global Physiological Saline market status and forecast, categorizes the global Physiological Saline market size (value & volume) by manufacturers, type, application, and region. This report focuses on the top manufacturers in North America, Europe, Japan, China, India, Southeast Asia and other regions (Central & South America, and Middle East & Africa).

Physiological Saline is a mixture of sodium chloride in water and has a number of uses in medicine. Applied to the affected area it is used to clean wounds, help remove contact lenses, and help with dry eyes. By injection into a vein it is used to treat dehydration such as from gastroenteritis and diabetic ketoacidosis. It is also used to dilute other medications to be given by injection.

Note: In this report, the unit should be bottle or bag, which depends on the package of the physiological saline. The unit is based on the average size of physiological saline which is 500mL for standard estimation.

In 2016, China is the largest supplier and consumption market of physiological saline with market share of 33.92% due to the largest population. Following China, both Europe and USA occupied market share more than 20%.

In recent years, the price of physiological saline is increasing slowly due to the increase of raw materials cost. The cost increase of plastic bottles is small larger than glass bottle. While the flexible bag physiological saline is still much more expensive than the former two. In the future, more and more flexible bag and plastic bottles will be used and the glass bottle may be out the market.

In China, thanks to the policies published, the price of physiological saline and other pharmaceuticals are asked to increase. In addition, the government also argued the market concentration degree should be higher.

In the global market, the market concentration degree is higher and higher. The market share unlisted companies occupied is lower and lower. With the development of

technology, the flexible bag physiological saline will be more and more.

The global Physiological Saline market is valued at 2750 million US\$ in 2017 and will reach 3670 million US\$ by the end of 2025, growing at a CAGR of 4.2% during 2018-2025.
