## Abstracts

Adding PI produces a PTFE compound that is lower in friction than all of those previously described. It is non-abrasive, making it a good choice for applications involving softer mating surfaces like steel, aluminium, or other plastics. Polyimide filled PTFE therefore suits dry running and stop-start applications particularly well. However, polyimide is the priciest of the PTFE fillers.

According to QYResearch's new survey, global PI Filled PTFE market is projected to reach US\$ 130.4 million in 2029, increasing from US\$ 72 million in 2022, with the CAGR of 8.7% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole PI Filled PTFE market research.

At present, the PI Filled PTFE market is very concentrated, with the top five companies occupying 91.3% of the market share.
