## Abstracts

A pinch valve is a full bore or fully ported type of control valve which uses a pinching effect to obstruct fluid flow. There are a few types of pinch valves based upon application.

Worldwide, Europe is the largest market of Pinch Valve, both in production volume and consumption volume market, while Germany is the largest contributor. It is estimated that Europe accounts for half of the industry total revenue and consumes about 37% of industry total consumption value. In 2015, China produces about 3.8% of the global total production volume. But most of the Pinch Valves produced in China are low-end products, most of which are quite cheap. So, on the production revenue, China only accounts for about 2.4% of the global total revenue. The market in other developing countries or regions, such as Southeast Asia and South America is becoming the most important emerging consumption market of Pinch Valve. And the production technology and production scale of Pinch Valve in these regions are also developing quickly, partly driven by the capacity movement from developed countries.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Pinch Valve 4900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
