## Abstracts

Placental stem cells are cells derived from the placental blood and other body fluids of a new-born baby. Stem cells are human cells classified into a different variety of cell types, including brain and muscle cells. Stem cells are sometimes used in the development of regenerative therapies. Regenerative medicine represents a category of scientific alternatives to stem cell therapy (such as tissue regeneration). These treatments include the capacity to regenerate human cells, tissues, or organs to return the body to healthy working. Stem cell therapies are used to cure and improve diseases like spinal cord injuries, Parkinson's disease, heart disease, and diabetes.
