Abstracts

Plant growth chambers are designed to produce environmental conditions (humidity and temperature) that maximize plant growth. They are sometimes called environmental chambers or terrestrial plant growth chambers. Applications include plant breeding and genetic research, photosynthesis, nutrition, and other aspects of plant physiology. Product features for plant growth chambers may include touch-screen controls, observation windows, additional lighting, humidity control, CO₂ enrichment, spray nozzle packages, air-cooled condensing, remote-controlled condensing, dry alarms, cabinets and shelving, dimmable lighting, extended temperature ranges, and heated or glass doors.

Schunk, Conviron, Snijders and Binder captured the top four revenue share spots in the plant growth chamber market in 2015. Schunk dominated with 16.85 percent production share, followed by Conviron with 11.01 percent production share and Snijders with 9.64 percent revenue share.

In 2015, the total installed Plant Growth Chamber capacity is estimated at 16985 unit per annum (of which 29.52% are located in North America, 36.5% in the European Union, 10.8% in Japan).

Demand is driven by demographics and the health of the economy. The profitability of individual companies depends on their ability to bid accurately, secure contracts, and control costs. Smaller companies can compete effectively by specializing in particular services or focusing on a certain geography. Despite fierce competition, due to the global recovery trend, investors are still optimistic about this area; more new investment will enter the field in the future.
