Abstracts

Aluminum composite material (ACM) is a three-layer sandwich panel consisting of two pre-painted aluminum sheets bonded to a polyethylene (PE) core. ACM panels are an excellent material for indoor or outdoor applications that require good dimensional stability, low weight, and a sleek, brilliant look.

Eye-catching, durable, and only half the weight of aluminum, ACM metal panels are both attractive and practical for use in visual merchandising, framing, archiving, commercial interiors and exteriors, construction, and fine art applications.
