Abstracts

An Injection molding machine, also known as an injection press, is a machine for manufacturing plastic products by the injection molding process. It consists of two main parts, an injection unit and a clamping unit.

Machines are classified primarily by the type of driving systems: hydraulic, electric, or hybrid.

Instead of being driven by a hydraulic system, all-electric machines use digitally controlled, high speed and highly efficient servo motors to drive the whole process. Each axis is controlled by an independent motor for injection, extruder, clamping and ejection.

In 2017, China's injection molding machine production accounted for over 60% of global production, the number reached nearly 95000 units, and the export volume reached about 36000 units. The product was mainly exported to Turkey, the United States, Southeast Asia, Brazil, etc. The main imported products are mainly high-end all-electric types, and the price of imported products is several times of export products. Chinese companies dominate the low-end market, and European and Japanese companies have advantages in the high-end market.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Plastic Injection Molding Machine 4900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events

restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Plastic Injection Molding Machine 4900 industry.
