An intermediate bulk container (or IBC) is a pallet mounted, industrial grade reusable container that is used for storing and transporting bulk liquids and powders. Also known as a tote, the IBC is capable of stacking and can be moved by a pallet jack or forklift. A “plastic rigid intermediate bulk container” or “IBC” is a rigid, self-standing vessel, lined or unlined, made from polymeric material. The typical volume is at least 119 gallons but not more than 793 gallons. IBCs are used to transport various liquid or solid products, including products identified as “hazardous materials” or “dangerous goods”. Plastic rigid IBCs are used in the food and beverage end use sector to store and transport bulk food products and various beverages across long distances from the manufacturing units. This end use category has seen a rise in demand for plastic rigid IBCs in the recent years. The food and beverage end use segment is expected to show a high pace with respect to use plastic rigid IBCs in the coming years and projected to register a high healthy CAGR of 6.2% during the forecast period.
