Podophyllin is a non-alkaloid toxin lignan extracted from the roots and rhizomes of Podophyllum species. Under the trade names Condylox, a gel, and Wartec, a solution or cream, it is used on the skin as a topical treatment of external genital warts, caused by some types of the human papillomavirus (HPV), and other warts. PPT and its synthetic derivatives display a wide selection in medical applications such as purgative, vesicant, antirheumatic, antiviral, and antitumor agents. These derivatives include etoposide and teniposide. Their anticancer activity has been heavily under study and used in various chemotherapies, including lung cancer, lymphomas, and genital tumors. In 2015, the world production of podophyllin reached 2282kg. Globally, podophyllin producers are concentrated in China. Though derived from developed countries in early days, China manufacturers gasped the market of podophyllin soon and dominated the world supply of podophyllin in later years. In 2015, China has taken 54.43% of world podophyllin production. Leading players in China are Haoxiang and Haoxuan, with a tail of other producers.
