Infectious disease doctors test your blood or other body fluids to look for specific antibodies — cells produced by our immune system to fight harmful foreign substances. These tests can indicate what kind of infection is present. For bacterial infections, treatment usually involves antibiotics. Launch of mobile & self-testing devices has increased access to testing and monitoring systems to the remote places where the provision of timely medical care is a challenge.

According to QYResearch's new survey, global Point of Care Infectious Disease Testing market is projected to reach US\$ 4411.8 million in 2029, increasing from US\$ 2635 million in 2022, with the CAGR of 7.7% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Point of Care Infectious Disease Testing market research.

According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years.
